

GQ, GS, GS-T, GZ, GT, GD, GS-L ACCESSORIES

HEATSINKS

DESCRIPTION

Different models of heatsinks have been designed and tested to meet size and dimension needs.

How to choose a heatsink

- Set max. air temperature inside the panelboard (T_{max_a})
- Set max. operating current: $I_{max} = I_{nom. load} + 10\%$

- Draw on the "graphs" T_{max_a} , I_{max} points.
- Choose the smallest heatsink (starting from upwards), which point $[T_{max_a} I_{max}]$ is in the gray working area of dissipation curves
- Respect installation distances

INSTALLATION

In order to obtain best reliability, it is important to install a heatsink correctly inside the panel, to reach an adequate thermal exchange between the device and the surrounding air in natural convection conditions.

How to install it correctly:

Mount it vertically (max. 10° inclination from the vertical axis)

- Vertical distance between a heatsink and the panel wall: 100 mm at least.
- Horizontal distance between a heatsink and the panel wall: 20 mm at least.
- Vertical distance between two heatsinks: 300 mm at least.
- Horizontal distance between two heatsinks: 40 mm at least.

Check that cable channels do not reduce these distances; should it happen, mount the relays overhanging from the panel, so that the air can flow vertically on the heatsink without obstacles (see Fig.1).

Fig. 1

DISSIPATION CURVES

Effective current controllable based on room temperature

DIS 15G

$h = 57\text{mm}$
 $R_{th} = 4,1^{\circ}\text{C/W}$
(*)

DIS 25G

$h = 100\text{mm}$
 $R_{th} = 3,12^{\circ}\text{C/W}$
(*)

DIS 25GD

$h = 100\text{mm}$
 $R_{th} = 2,8^{\circ}\text{C/W}$
(*)

DIS 40G

$h = 100\text{mm}$
 $R_{th} = 1,90^{\circ}\text{C/W}$
(*)

DIS 50G

$h = 100\text{mm}$
 $R_{th} = 0,83^{\circ}\text{C/W}$
(*)

DIS 60G

$h = 100\text{mm}$
 $R_{th} = 0,66^{\circ}\text{C/W}$
(*)

Should the stated point $[T_{max_a} I_{max}]$ be outside the working area, it is necessary to equip the heatsink with a fan and a safety thermostat.

N.B. The operating point has not to be outside the delimited area.

- DIS908/910 heatsinks are suitable for three-phase solid state relays of GZ series.

- Controlled three-phase effective current refers to the used line current of three-phase load.

- Heatsinks used with a cooling fan should be equipped with safety thermostat, so that the solid state relay can be switched off in case of fan failure.

(*) Data surveyed with 40°C ambient temperature and heatsink in vertical position surrounded by 15 cm free space; natural convection; contact surface with the heating element = ~ 8cm² [38mmx 20mm]

DESCRIPTION

Safety thermostat is expressly designed to prevent overtemperature.
 Thanks to the miniaturized case the thermal answer is excellent. Furtheron, the thermostat is a very good thermal protection, as it can be mounted very near to the critical point which has to be controlled.
 When it is connected in series to control voltage, the thermostat disenergises the relay as soon as the critical operating temperature is reached. Relay is energised again when temperature drops underneath the critical value (about 90°C).
 The thermostat is normally closed and opens when temperature exceeds 90°C (with automatic reset).
 Connection in series with the input control is suggested.
 TGRZ is installed in one of the two slots of the GZ three-phase solid state relay case.
 TGR is fixed by means of a small bracket and of a screw (enclosed).
 The VIR-1 thermostat is supplied as a spare part for: W21x ≥ 150A solid state power units.

RV04	291-400 Vac
RV05	401-500 Vac

HEATSINKS ACCESSORIES

FANS

DESCRIPTION

An additional fan, applied to the heatsink of a solid state relay, improves its dissipation performance and allows the solid state relay to work at higher ambient temperatures with the same current. Fan installation benefits are shown (dashed) by the dissipation curves of the different heatsinks.

SOLID STATE RELAY ACCESSORIES

FUSES AND FUSE HOLDERS

DESCRIPTION

These fuses ensure the maximum safety in solid state relay applications. Fuses with a very high cutoff power are used for this kind of applications.

TRAFO - 5B: 10VA transformer, 24/24Vac

• Current transformer

These transformers are used for currents of 50/60 Hz. The main characteristic of these transformers is the high number of turns in the secondary. This provides a very low secondary current, suitable for an electronic measurement circuit.

The secondary current can be measured as a voltage on a resistor.
